

## **Project Title:** Indian Travels - A Travel and Tour Website

### **Project Description:**

The "Indian Travels" website is designed to provide users with information and options for booking holiday tours, both within India and internationally. It aims to simplify the process of finding and planning travel by showcasing trending tour packages, highlighting key destinations, and offering search functionality.

### **Key Features:**

- **Homepage:**
  - **Navigation:** A header section with links to different sections like "Indian Holidays," "International Holidays," "Cruise," "Flights," and "Hotels."
  - **Search:** A search bar to allow users to find holidays by destination or theme.
  - **Trending Packages:** Highlights trending tour packages with a brief description to entice users.
  - **Destination Showcases:** Displays popular Indian and international travel destinations with images and links.
  - **Informative Content:** Provides general information about domestic and international travel.
  - **"Why Us" Section:** Promotes the benefits of using "Indian Travels" with features like "Trusted Advisor," "Responsive," "Memorable Experiences," "Easy Booking," and "Customer Service."
  - **Footer:** Contains contact information (phone number, email) and social media links.
- **Indian Holidays Page:**
  - Displays a variety of Indian tour packages categorized by destination.
  - Includes images and links for places like Jammu and Kashmir, Kerala, Goa, Himachal Pradesh, Andaman and Nicobar, Ladakh, Rajasthan, Char Dham, Uttarakhand, Lakshadweep Islands.
  - Showcases honeymoon packages for destinations within India.

- Footer with contact information and social media links.
- **International Tours Page:**
  - Presents international tour packages for various countries.
  - Features destinations like Europe, Dubai, Vietnam, Thailand, Japan, Turkey, Switzerland, Australia, Egypt, and Greece.
  - Offers international honeymoon package options.
  - Footer with contact information and social media links.

### Technology Used:

- **HTML:** For structuring the web pages and content.
- **CSS:** For styling the layout, appearance, and responsiveness of the website.

### File Structure:

- home.html: The main homepage.
- home.css: CSS styles for the homepage.
- indian\_holidays.html: Page dedicated to Indian tour packages.
- indian\_holidays.css: CSS styles for the Indian holidays page.
- international\_tours.html: Page for international tour packages.
- indian\_holidays.css: (Note: This CSS file is used for international\_tours.html as well, which might indicate some shared styling or an organizational choice).

### Overall Design and User Experience Goals:

- **User-Friendly Navigation:** Easy to navigate between different sections of the website.
- **Visually Appealing:** Uses images to showcase destinations and create interest.
- **Informative:** Provides relevant information about tour packages and destinations.
- **Promotional:** Encourages users to book tours through "Indian Travels."

- **Responsive:** The CSS suggests that the layout aims to adapt to different screen sizes (though full responsiveness would need thorough testing).
